About Databeans

Databeans, Inc. provides semiconductor and electronics market research reports and databases. Our goal is to fulfill the need for actionable market intelligence that helps our customers make successful business decisions and aid in strategic planning across all product lines. Databeans has grown to become a vital source of information and respected advisor to our clients.

MISSION STATEMENT

To provide customers a resource of professional analysts and comprehensive research material, delivered in a timely manner.

OBJECTIVE

Databeans wants to help you communicate the latest market conditions and trends to your sales, marketing, and management teams. We provide you with the tools and people to accomplish this. Today's professional is inundated with so many data points, making it hard to deliver a clear and concise message. Databeans is here to help work through the material and to help you make effective decisions that lead to your success. We improve the value and contribution of our clients' management, marketing, and sales teams. Our goal is to become a vital guide to your organization by providing analysts and objective information.

OUR METHODOLOGY

Databeans provides market statistics on semiconductor products classified based upon World Semiconductor Trade Statistics (WSTS) product category definitions. Submarkets, broken out beyond WSTS, are defined by Databeans in cooperation with suppliers. Historical product revenue and shipments for semiconductor products are sourced from WSTS and from supplier surveys. Forecasts are constructed based on monthly projected growth rates moving forward five years.

Databeans also provides semiconductor market statistics by end equipment area. End market application demand is determined by inputs from OEMs and we track over 250 applications. The estimated consumption of semiconductors is collected from OEM/CEM design engineers, Databeans teardown analysis, and/or a collection of reference designs from suppliers. Each device is evaluated for the total used in the design and a forecast is generated using the application shipment estimates and the total value of the semiconductor product in the design.

Historical product market share data is assigned based upon supplier inputs to an annual survey and estimates made by our analysts using publicly available information.

Our Products

Databeans has created many ways to customize our products and services to fit within your organization's needs. Whether your company requires complete semiconductor market insight, or just a corner of the semiconductor market your company focuses on, Databeans has everything needed to make informed decisions. By purchasing multiple products constituting a service, customers have full access to our research analysts throughout the entire subscription period.

REPORTS

Databeans offers over 50 market and product reports that are comprehensive and unique in the market research industry. We track more application markets and more semiconductor product markets than any other competitor. Individual research reports include one complementary hour of Analyst Inquiry Bank. Additional hours can be purchased separately. All reports are delivered electronically in PDF format and include an Excel spreadsheet containing all of the table data.

SUBSCRIPTION SERVICES

Databeans subscription services are combinations of reports and/or database tools. There is a minimum of 3 report products that are required to be purchased to create a subscription service. Subscription services include our Analyst Inquiry Bank (formerly known as Staff on Demand). The Analyst Inquiry Bank is a vehicle for customers to use to get more research material in addition to the products included in their service. Each of our analysts is available to provide more detailed cuts of the market data we provide. Inquiries are responded to quickly, usually turning projects around in a few days, depending on the complexity of the request. The Analyst Inquiry Bank hours varies depending on the number of products bundled into the service. There are three hours per report product assigned for the Analyst Inquiry Bank support.

BENEFITS OUR CLIENTS ENJOY WITH A DATABEANS
SUBSCRIPTION SERVICE

Databeans will become an extension of your group.

With our service subscribers, Databeans will help with presentations, fact-finding inquiries, and essentially any project that internal groups may not have the time or resources to accomplish.

Your Company receives corporate-wide site licensing.

We encourage our clients to post our reports on their internal website, at no additional cost. This allows for maximum visibility and value of Databeans data and reports within your company.

Receive a discount on our Database Tools

Our Market Database becomes more affordable with each bundled subscription service; the larger the subscription service, the higher our discounts will be for the databases. Subscribe to all Databeans reports and receive the Market Database and Share Database for free.

Work within your budget.

We can create any type of payment plan that you desire. Call us to see which options will work best for your group or company.

Ease of doing business.

By ordering once a year, your company will automatically receive the reports or services ordered when they first become available.

Receive maximum savings when your company purchases a service.

- Our minimum discount with our smaller services is about 25% off list price, while our full service customers save about 45% off list price.
- Purchase any Databeans service and your company qualifies for a 20% discount on any non-service report Databeans publishes.

DATABASE TOOLS

Databeans offers two excel databases. One is the Market Database which is a total market model for all semiconductor products. Portions of this database can be purchased separately, so please contact us if you would like pricing. The other database is our Share Database which includes market share for over 90 semiconductor suppliers for over 90 products by region and includes historic data back to 2005.

MARKET DATABASE

Databeans Market Database is our data engine that provides users with annual revenue estimates for over 90 semiconductor product categories, annual revenue and shipment estimates for over 150 applications categories, and annual BOM estimates for the silicon content in each of these applications. Not only are worldwide estimates presented, but also for each geographic region. Users will be able to use this tool to not only pull aggregated high level numbers for industry segments such as “wireless” or “medical” or “automotive” or “power management” or “LEDs,” but be able to drill down to demand for a specific product in a specific region for a specific application, such as “switching regulators” in “3G handsets” in “Asia Pacific”.

The data is updated monthly for the production of semiconductors and quarterly for the application shipments. The database is provided in Excel so it is familiar to users, with no additional overhead or training required. As long as users can work with and understand a spreadsheet, they can be skillful with this model and save valuable time getting to the market statistics they need. The spreadsheet is open so users can cut and paste, or run any summations or CAGRs they choose. There are over 44,000 rows of data in this spreadsheet.

SHARE DATABASE

Databeans Market Share Database contains worldwide and regional market share for 80 semiconductor categories and 78 semiconductor suppliers. Aggregated market share by market is also included for automotive, industrial, computer, consumer, and communications. Share is presented for the last calendar year as well as the one before that for comparison. The spreadsheet is open so users can cut and paste or run any summations for combined SAMs they choose. This is the same market share data our research team uses for all of our market research products.

Q & A

Are there special restrictions on access to research reports (can I post them on an intranet site for the whole company to use)? No. All Databeans reports have unlimited seats and can be shared around the company at your discretion.

What do I do if I want to use data from the reports in material to be presented outside of the company? Please let us know what material you are publishing and list us as a source.

How do I initiate a request for Analyst hours? Either send us an email or call.

What happens if my company uses up all of our Analyst Inquiry Bank included with the service?

Databeans provides an Analyst Inquiry Bank for additional support. Purchase blocks of extra Analyst Inquiry hours to cover any additional time your group or company may need to complete your projects. Each block is five hours of additional support, and is available to carry over to additional reports, groups, and services, however your company chooses to use it. Buy one or more blocks. The additional staffing and support will be beneficial to your group.

What if our company doesn't use all of our additional Analyst Inquiry Bank support blocks?

The purchased Analyst Inquiry Bank support is available to carry over to the next calendar year as a credit for any additional support needed in your subscription renewal. Although the Analyst Inquiry Bank hours are nonrefundable, as long as you are a current customer of Databeans your company will never lose your purchased blocks. This is not a use it or lose it scenario, this is a bank of time available to use as you need it, when you need it. The complementary three hours per report product of Analyst Inquiry Bank that is included with your service expires at the end of your contract term.

Why would I consider purchasing blocks of Analyst Inquiry Bank time?

Our reports are detailed and comprehensive on each product and market we write about. If you need any additional support on a single report, your three hours of included analyst hours will be more than sufficient to provide the support needed to complete your tasks. If you need more than the three hours allotted to each report, chances are your inquiry is more of a custom research project than a general support inquiry. By purchasing additional support, we can spend the needed time to complete your inquiry, whether it is simple fact finding, surveying competitors, or perhaps breaking out markets and products at the granularity required by your team. Whatever the need, the additional analyst time with Databeans will give your company the additional analyst support to complete you project.
