Global Analog IC Market Share

RESEARCH BRIEF

Global Analog IC Market Share

Susan Inouye
Publication Number: AVR002PRELIM
February 2003

Abstract: 2002 was a flat year for analog IC suppliers. While a few ASIC categories and analog power management showed strength, gains were offset by the other standard product groups and relatively flat performance in wireless and consumer ICs.

In the analog IC industry, the top thirty suppliers control 90% of the market. The top five suppliers control 45% of the market with a combined reported revenue for analog at \$10.7 billion. Use this research brief to measure performance in 2002 relative to the competition. Thirty analog suppliers are ranked based on 2002 revenue estimates for analog products.
