Abstract

The analog power IC market is one of the fastest growing product segments in the semiconductor industry. Revenue is expected to increase on an average of 15 percent annually, while unit shipments are expected to increase 17 percent each year on average.

This new study provides revenue, unit, and ASP forecasts as well as revenue forecasts by market segment, by region, and by product. End application unit shipment forecasts are provided and market share is presented for total power management, switching regulators, linear regulators, and voltage references and other. Analog power ICs include switching regulators, linear regulators, voltage references, hot swap controllers, voltage references, supervisors, charge controllers, fuel gauges and other battery management.
